DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 and 12-14 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

All claims must contain a preamble, transitional phrase and a body. These claims contain no transitional phrase or body. Also, method claims must include at least one step. Claims 12-14 do not include any steps. These claims are unduly broad and do not set forth any structure or steps to allow one to ascertain the scope of the claims. The claims must be written in a manner commensurate with the scope of the invention.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- (e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Stoisits et al 5.421.408.

Art Unit: 3672

While it is unclear what applicant is claiming, claim 1 has been interpreted as claiming a device for simultaneously injecting gas and liquid into a well. Stoisits discloses this in figure 4. As to claims 2 and 3, Stoisits discloses a pressure sensor at the bottom of the well to control injection rates. While the sensor is at the bottom of the well, it is the wellhead pressure that controls the injection rate. As to claim 4, the gas can be injected in pulses. As to claims 5 and 6, the gas and liquid can be injected while producing. Again, only the structure set forth is given any weight. No weight is given to compressed gases cooled by recovered liquid since Stoisits clearly is capable of injecting compressed gases. As to claims 7-9, these claims contain no structure whatsoever.

Claims 3-5 are rejected under 35 U.S.C. 102(b) as being anticipated by McCarvell et al 3,147,808.

McCarvell discloses a system for injecting gas controlled by wellhead pressure. As to claim 4, the gas can be injected in pulses. As to claim 5, the device injects fluids without interrupting production (see col. 5, lines 35-37).

Claims 3-5 are rejected under 35 U.S.C. 102(e) as being anticipated by Dalsmo et al 6,595,294.

Dalsmo discloses gas lift injection controlled by wellhead pressure. As to claim 4, the gas can be injected in pulses. As to claim 5, the gas can be injected without interrupting production.

Claims 1 and 12 are rejected under 35 U.S.C. 102(b) as being anticipated by Prats et al 3727686.

Art Unit: 3672

Prats discloses a method of simultaneously injecting gas (air) and liquid into a well (see fig. 1). As to claim 12, the liquid is a heated liquid.

Allowable Subject Matter

Claims 10-12 are allowed.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to William P. Neuder whose telephone number is 571-272-7032. The examiner can normally be reached on Tuesday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, David J. Bagnell can be reached on 571-272-6999. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free). If you would like assistance from a USPTO Customer Service Representative or access to the automated information system, call 800-786-9199 (IN USA OR CANADA) or 571-272-1000.
